Cooler Temps Should Bring Home Heating Fire Safety Awareness

Jackson – Fall has arrived in Mississippi, bringing with it cooler weather and the first heating related fire death of the season. An 82-year old Lawrence County man died over the weekend as the result of a heating related fire in his home.

While the days may be mild, nights are getting cooler and people, especially the elderly, who are more susceptible to the cold, are beginning to turn on and use space heaters. Commissioner of Insurance and State Fire Marshal Mike Chaney urges the public to be mindful of the fire risks associated with home heating.

“Too many fires and fire deaths are caused by faulty heating equipment or people using ill-advised methods to stay warm,” Chaney said.

“Take extreme care when choosing a heating source. Make sure you have a working smoke alarm in your home. Working smoke alarms can cut the risk of people dying in home fires in half.”

A 2010 National Fire Protection Association (NFPA) report shows the leading factor contributing to ignition for home heating fire deaths was heating equipment too close to things that can burn, such as upholstered furniture, clothing, mattress, or bedding. Home heating fires peak during 6:00 to 8:00 p.m., and associated deaths peak during 2:00 to 4:00 a.m.

The State Fire Marshal’s Office recommends the following heating fire safety tips:

- All heating equipment should be UL® approved and cleaned and inspected by a qualified professional prior to being used each year.
- Remember to keep clothes, drapes, and anything else combustible at least 3 feet away from all heating equipment, especially space heaters.
- Inspect the space heater's power cord for damage, fraying or heat. If the cord inspection reveals any of these issues, the heater should be replaced. Proper cleaning is essential and should be done regularly.
- Never use space heaters while you sleep, when you are away from home, or in areas where children may be without adult supervision.
- Always unplug space heaters when they are not in use. The heater should also be equipped with a tip over shut-off switch.
- Use only traditional heating equipment.
- Never use a stove or oven to heat living spaces. Kerosene is a poor choice for heating as it will give off poisonous fumes.
- Have chimney flues cleaned and inspected by qualified personnel
- Have a spark screen that is age appropriate for all individuals using any area to be heated by a fireplace
- Burn only approved materials in a fire place or wood burning stove; never burn paper or trash in a fireplace or wood burning stove.
- Should a fire break out in the home, have an emergency evacuation plan for the family to follow and have a designated meeting place for all family members. Once everyone is outside the burning home, call 911 and DO NOT RE-ENTER THE HOUSE UNDER ANY CIRCUMSTANCES!!!
